

Product Description

Anglomoil Multitrac is a premium multi-functional universal tractor transmission oil (UTTO) for use in transmissions, final drives and hydraulic systems of modern farm and industrial wheel and crawler tractors and off-road equipment where fluids meeting major UTTO specifications are recommended.

Product Features & Benefits

Anglomoil Multitrac is suitable for modern complex power shift transmissions providing the following benefits:

- Consistent Viscosity throughout working temperatures
- Extremely shear stable.
- Minimises squawk and chatter in wet brake systems and PTOs
- Reduces wear of gears, pumps and hydraulic valves
- Provides efficient engagement of power take off clutches, thereby minimizing wear
- Long service life and freedom from sludge's and deposits in severe applications
- Excellent protection against rust and corrosion
- Good low temperature performance, providing correct operation of hydraulic systems in cold weather
- Good filterability
- Reduced maintenance and greatly extended equipment life
- Protects gearbox and working components due to antifoaming properties

Background

Earthmoving equipment and farm tractors have developed into mobile processing plants, capable of performing a multitude of tasks. In addition to the usual automotive equipment, modern machines are also fitted with semi-automatic transmissions, wet brakes, power take-offs and extensive hydraulic equipment. A number of Machinery manufacturers have developed their own oil specifications but with the development of oils such as Anglomoil Multitrac most of the industry specifications can be met or exceeded.

Typical Characteristics

S.G. @ 20 °C	0.865	Viscosity @ 100°C	11.0
Viscosity @ 40°C	73.4	Viscosity Index	139.8
