

Product Description

Anglomoil Super Injector Cleaner is a concentrated gasoline detergent which is formulated to clean carburettors, port fuel injectors and intake valves whilst controlling combustion chamber deposits. There is a wide variety of fuel additives on the market, and the better-quality products will provide a basic “keep clean” effect, ranging up to a deposit clean up effect depending on the strength and effectiveness of the product.

Anglomoil Super Injector Cleaner will clean up combustion chamber deposits when used consistently at the recommended treat rate.

The Problem

Fuel injector and intake valve deposits can lead to problems that affect engine performance. These deposit related problems can include:

- Dirty fuel injection systems and carburettors.
- Intake valve deposits
- Poor driveability – stumbling, stalling, or rough idling
- Reduced power and acceleration
- Decreased fuel economy
- Poor emissions

Anglomoil Super Injector Cleaner is formulated to eliminate the source of these problems – the deposits. By eliminating the deposits, vehicle owners can restore lost performance and fuel economy.

The Solution

Use Anglomoil Super Injector Cleaner at 200 ml at each re-fuel to:

- Maintain fuel injectors and intake valves in a like new condition for continued strong vehicle performance.
- Reduce fuel injector deposits, thereby correcting the problems caused by them.
- Clean intake valve deposits to restore lost performance.

Caution

Beware of products which claim huge improvements in fuel economy. If they sound too good to be true, it’s because they are!!!
